

5 Year Semester Plan

All Bachelor degree programs require a minimum of 128 credits to graduate. *If your goal is to be finished in four years, you must satisfactorily complete at least 16 credits a semester.*

MYTH: It only takes 4 years to complete requirements for a bachelor degree

REALITY: Nationwide, most students are graduating in five to six years because of outside factors such as work, family, indecisiveness, and other responsibilities.

Practice designing your own plan of study below. Remember to balance each semester - keep in mind the Goals that your major requires, course styles, and any outside commitments.
