**About the HOPE program** The HIV Office on Psychology Education (HOPE) is funded by a five-year contract with the Center for Mental Health Services (CMHS) of the Substance Abuse and Mental Health Services Administration (SAMHSA). The American Psychological Association (APA) Office on AIDS administers the HOPE Program network of regional HIV/AIDS trainers. Through HOPE's national train-the-trainer model, the Office on AIDS endeavors to enhance psychologists' ability to competently and compassionately respond to people infected and affected by HIV. The HOPE Program has trained and certified more than 450 Regional HOPE Program Trainers to deliver interactive workshops for mental health providers in their area. These trainers have in turn provided HOPE curriculum training in their communities to more than 20,060 mental health professionals. Further information about HOPE is available on their website (<http://www.apa.org/pi/aids/hope.html> ) along with downloadable PDF files of curriculum materials and other resources.
