

Chapter Questions

1. Explain the geographic mosaic theory of coevolution.
2. What effects do a coevolutionary hotspot have on the surrounding populations?
3. Why do evolutionary ecologists need to be careful when interpreting coevolutionary mutualisms?
4. Why is this a challenging topic to study? What is needed for future studies?

Paper Questions

5. Summarize the results from the paper.
6. How do the moths from the paper fit in with the crossbill-squirrel-lodgepole pine study from the book chapter?
