Contact Tracing, COVID & Class

<https://www.isu.edu/roaringback/faq/faculty-and-instruction-faqs/>

ROAR

What should I do if one of my students reports symptoms of COVID-19, is visibly ill or reports a positive test result that was done in the past 10 days?

- If the student came to class, send the student home to isolate.
- Instruct the student to report their illness using [this form](#).
 - If you are concerned that the student did not complete the form contact the COVID-19 hotline at covid@health.isu.edu or (208) 282-2705.
- Do not notify the class or other students about a suspected illness without direction from the health committee. The health committee will work with the faculty members, the local health district to conduct contact tracing and follow up notification for any colleagues, students, or other individuals who may have had close contact and therefore need to take additional measures.
- The faculty member should email the following information to covid@health.isu.edu.
 - Prepare a list of the other people in your classroom or learning environment who had close contact with the ill individual for the time period including 72 hours before symptoms onset up to the last day in the classroom.
 - Close contact is interaction within 6 feet of someone who has COVID-19 for at least 10 minutes whether or not they had symptoms.
 - The faculty member should email this information to covid@health.isu.edu.
 - The health team will reach out to provide additional next steps and guidance.
- If the student was in class, close the workspace and contact [Facilities Services](#) for cleaning and disinfection.
