This bill changes the number and proportion of student senators.

**ASISU CONSTITUTION BYLAWS**

**ARTICLE I—STUDENT GOVERNMENT**

Section 6—Reapportionment

Clause 2 — The number of senators will be twenty (20). The rightful number of senators from each college will be decided by taking the total number of full-time equivalent students (according to calculation from previous clause) from each individual college and dividing it by the total enrollment for the university. This calculation will give a percentage. Take this percentage and multiply it by twenty (20). The resulting number is the number of senators for that college. Always round down to closest whole number. For example: after calculations the College of Science and Engineering has the number 1.25, therefore the college is given one senator. Repeat for each college. If the case should arise that one or more senator(s) must be assigned to complete 20 senators, assign the senator(s) to the college(s) with the number closest to the next whole number. The largest college shall receive three senators, the next three largest colleges shall each receive two senators, and the remaining four colleges shall each receive one senator, based upon enrollment. These numbers will be effective upon inauguration at the End-of-the-Year Banquet until the next reapportionment and should be used for the spring elections of the current academic year.
