Colloquium

Étude in F

Dr. Rebekah Yates
Houghton University

After some highlights of the first century in the life of the classical numerical range, we'll take a tour of results on finite field numerical ranges, introduced just a decade ago by a group of undergraduates who inspired several others, both professional mathematicians and undergraduate and graduate students, to dive into this exciting new field of research. Along the way, we'll touch on several areas of mathematics and learn how to impress Supreme Court Justices.

Wed., April 22

4:00 pm

PS 308
