

**MATH 1123P**  
**Math in Modern Society (Plus)**  
**(Effective Fall 2026)**

Math 1123[Plus] is for students who would like to take Math 1123 to satisfy their General Education Objective #3 but do not have the necessary minimum placement exam score to take 1123 or who has not met the prerequisite coursework.

**Eligibility:**

There are no prerequisite placement test scores or coursework required to be eligible to enroll in Math 1123P.

Students in Math 1123P will be able to complete the Math 1123 material, without taking any prerequisite courses, because you will learn the necessary prerequisite material in addition to the Math 1123 material in this course.

Placement score ranges for the 1123P vs 1123 course are as follows:

<b>1123P</b>		<b>1123</b>	
ALEKS:	n/a	ALEKS:	30-100
ACT:	0-19	ACT:	19+
SAT (new):	0-490	SAT (new):	500+

**Note:** Both 1123 and 1123P fulfill Objective #3. However, if your degree requires that you take additional math or statistics courses, you may need to take Math 1108 or 1108P instead.

*For example, if your degree program requires that you take Math 1143 or 1170, both of which also satisfy Objective #3, it would be more beneficial for you to take Math 1108 or 1108P because 1123 will not satisfy the prerequisite for 1143, and 1143 is the prerequisite for 1170.*

**Before you enroll in Math 1123P, you should:**

- Know that 1123P will require a great deal of work on your part. The course covers more material than the traditional 1123 class and meets four days a week, rather than three. If you fall behind, it may be difficult to catch up.
- Meet with an adviser in Academic Advising who will communicate the expectations and benefits of successfully completing 1123P and answer any questions you may have. An advisor can also help you balance your workload.
- Take the ALEKS placement exam to see what math class(es) you are eligible to take. This exam will determine what your math skill level is and could save you time and money by preventing you from having to drop a class that you were not prepared for or save you from taking a prerequisite course that you may not have needed.

**Benefits:**

- 1123P will cover only the necessary prerequisite material that you need for the 1123 material.
- You will get a review of the math skills that you need to be successful in this course.
- You will complete the course sooner by not having to complete any prerequisite coursework.
- You will save the tuition and fees of taking the prerequisite math course.
- You will complete Objective #3 ahead of schedule.
