

Self-Attestation Form for COVID-19 Vaccination:
Moderately to Severely Immunocompromised Patients

CDC recommends that people who are moderately to severely immunocompromised receive an additional dose of an mRNA COVID-19 Vaccine (Pfizer-BioNTech or Moderna) at least 28 days after the completion of the initial mRNA COVID-19 vaccine series.

Patients may self-attest to their condition by completing and signing this form.

Please check one of the following and sign at the bottom.

Moderately to severely immunocompromised includes people who have:

- Receiving active cancer treatment for tumors or cancers of the blood
Received an organ transplant and are taking medicine to suppress the immune system
Received a stem cell transplant within the last 2 years or are taking medicine to suppress the immune system
Moderate or severe primary immunodeficiency (such as DiGeorge syndrome, Wiskott-Aldrich syndrome)
Advanced or untreated HIV infection
Active treatment with high-dose corticosteroids (i.e., >=20mg prednisone or equivalent per day for > 14 days) or other drugs that may suppress your immune response [e.g., alkylating agents (cyclophosphamide); antimetabolites (methotrexate); transplant-related immunosuppressive drugs (cyclosporine, tacrolimus, everolimus); TNF-blockers (etanercept)]
Other condition(s) which cause moderate or severe immunosuppression similar to the above conditions

FIRST DOSE: \_\_\_/\_\_\_/\_\_\_ SECOND DOSE: \_\_\_/\_\_\_/\_\_\_

People should talk to their healthcare provider about their medical condition, and whether getting an additional dose is appropriate for them.
